

GRAVITY WAGON AUGERS

Kasco's Innovative Hopper design allows materials to drop directly into the auger for less seed damage and more positive flow. Different sized hoppers are available, to handle up to a 45" opening on your wagon. A heavy duty winch with built-in brake is included, as is a heavy duty transport bracket to lock the auger in place.

Lengths of 12' or 14' are available. Flighting choices include steel, cupped plastic, and brush. An optional telescoping tube is also available, for added reach.
